

Dataplace - System release notes for 5 August 2024

This document identifies changes made to Dataplace navigation and interactive forms.

| Dataplace Portal | |
|----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Feature | Description |
| Improved search functionality in the Australian Government Data Catalogue | Search Facets. In response to feedback, users will have the ability to search for specific data custodians or themes using an improved search facet in the Australian Government Data Catalogue. |
| Changes to Making a data request | Custodian and asset search enhanced when starting a Data Sharing Request. Requestors can now initiate a data request and search for data custodians or assets in the Australian Government Data Catalogue before continuing with the data request. In addition, Requestors can change the chosen data custodian when making a data request. |
| Autosave functionality available for Data breach form | Users can now return to a previously started Data Breach form. Users will need to sign in to Dataplace to report a data breach to ensure progress on partially completed forms are autosaved. If a signed-in user has a partially completed form, a warning prompt will display when starting a new form. |
